

## ICA POLICY STATEMENT ON

# *Videofluoroscopy*

***Definition:*** Videofluoroscopy, Dynamic Spinal Visualization or Cineradiography is the specific, chiropractic, radiographic procedure, study, and interpretation of the dynamics and kinetic properties of the spinal column and its immediate articulations.

The International Chiropractors Association holds that videofluoroscopy, also known as cineradiography or dynamic spinal visualization, is a technology that is especially useful in the observation, determination and classification of kinetic irregularity as seen in the vertebral subluxation complex. A significant body of valid scientific literature has been found to support this conclusion.

The International Chiropractors Association officially recognizes videofluoroscopy to be an acceptable part of chiropractic care for the Doctor of Chiropractic who is trained in this procedure.
